

Floating Barge Packages

Engineered around your custom specifications

Custom designed Floating Barge Packages are perfect for applications that require mounting the pump over a large body of liquid. Floating Barge Platforms can be towed into place and anchored, where a pump can then be lowered or raised on an integral hoist for ease of access. Our engineers will work with you to design a system that is tailored to your project and requirements.

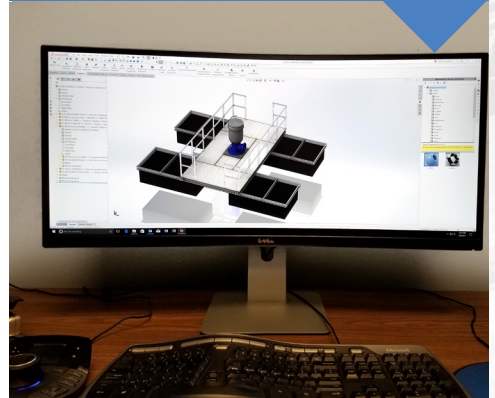

Discovery

We meet the customer to determine the needs and requirements for their specific project.

Design

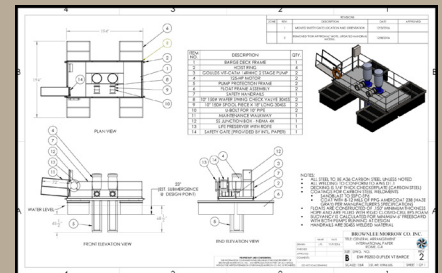

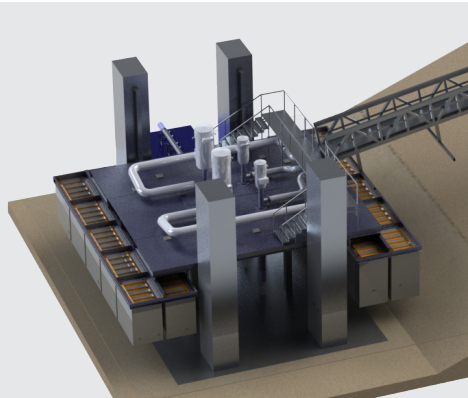

Using the latest 3D design software, we design and create a 3D rendering of the project, along with detailed engineering drawings and specifications.

CUSTOM FLOATING BARGE PACKAGES

Approval

Rendering, drawings and specifications are reviewed with the customer for final approval before fabrication.

To learn more about our **Floating Barge Packages** could benefit your project, contact your Vulcan Pumps sale representative or ask to consult with one of our engineers.

Fabrication

Using the approved drawings and specifications, our team builds the barge package.

Shipment

Once complete and tested, the Floating Barge Package is delivered to the job site and installed.
