

Versatile, Reliable Pumps for a Wide Range of Applications

- Pumps the full spectrum of low-to-high viscosity fluids.
- Features a seal-less design and horizontal disk check valves that enable the pump to handle abrasives and particulates that might damage or destroy other types of pumps.
- Simple, compact design reduces initial investment and lowers maintenance costs.
- Operational efficiencies reduce energy costs.
- Able to run dry without damage (or additional maintenance) to the pump in case of accident or operator error.
- Tolerates non-ideal operating conditions.
- Minimizes maintenance and downtime because there are no mechanical or dynamic seals, packing, or cups to leak, wear, or replace.

F20 Series

Maximum Flow Rate:I.0 gpm (3.8 l/min)Maximum Pressure:I 500 psi (103 bar) for Metallic Pump Heads350 psi (24 bar) for Non-metallic Pump Heads

F20 close-coupled for 56C frame motors, shown with Brass pump head.

F21 shaft-driven, shown with Polypropylene pump head.

F22 flexible-coupled to 56C, 142TC, and 145TC frame motors, shown with 316L Stainless Steel pump head.

F20 Series Performance

Max. Input	Max. Flow @ 1000 psi (69 bar)		
rpm	gpm	l/min	
1750	1.01	3.82	
1750	0.71	2.69	
1750	0.56	2.12	
1750	0.31	1.17	
1750	0.20	0.76	
	Input rpm 1750 1750 1750 1750	Input rpm @ 1000 p gpm 1750 1.01 1750 0.71 1750 0.56 1750 0.31	

Capacities

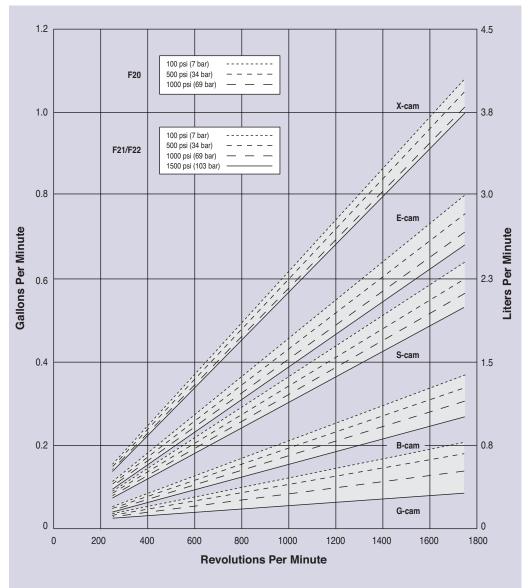

Pressure

Maximum Inlet Pressure 250 psi (17 bar)

Aaximum Discharge Pressure
Metallic Pump Heads:
F20 to 1000 psi (69 bar)
F21 to 1500 psi (103 bar)
F22 to 1500 psi (103 bar)
Non-metallic Pump Heads:
250 psi (17 bar) Polypropylene
350 psi (24 bar) PVDF

Performance and specification ratings apply to F20, F21 and F22 configurations unless specifically noted otherwise.

Maximum Flow at Designated Pressure

Weight								
Metallic Hea		12 lbs. (5.5 k						
Non-metalli	on-metallic Heads: 9 lbs. (4.1 kg)							

Calculating Required Power

rpm + 1000 7000	+	gpm x psi 1,460	=	electric motor hp
rpm + 1000 9383	+	l/min x bar 511	=	electric motor kW

When using a variable frequency drive (VFD) controller, calculate the hp or kW at minimum and maximum pump speed to ensure the correct hp or kW motor is selected. Note that motor manufacturers typically de-rate the service factor to 1.0 when operating with a VFD.

Net Positive Suction Head (NPSHr)

Positive inlet pressure required for:

A) All pumps with PTFE diaphragms

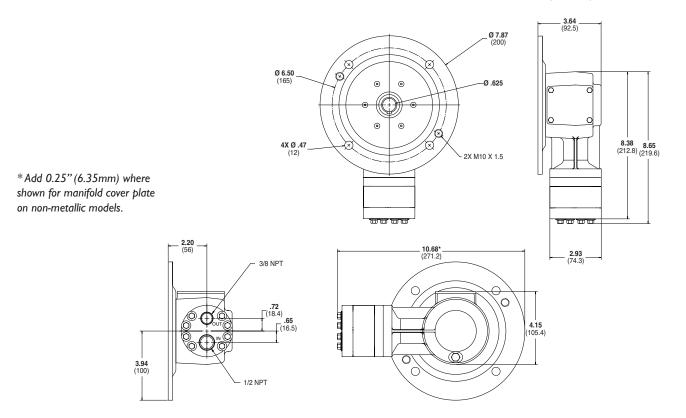

B) Pumps with B-cam or G-cam (consult factory)

Self-priming:

Each Hydra-Cell pump has different lift capability depending on model size, cam angle, speed, and fluid characteristics. To ensure that your specific lift characteristics are met, refer to the inlet calculations regarding friction, and acceleration head losses in your Hydra-Cell Installation & Service Manual. Compare those calculations to the NPSHr curves above.

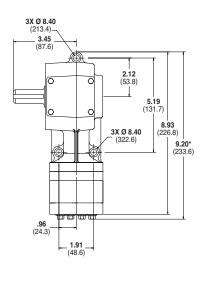

F20 Series Representative Drawings

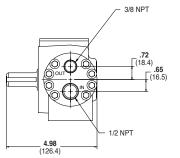

F20 Models with Metallic Pump Head Inches (mm)

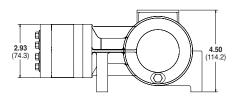

F21 Models with Metallic Pump Head Inches (mm)

2.25 (57.1)

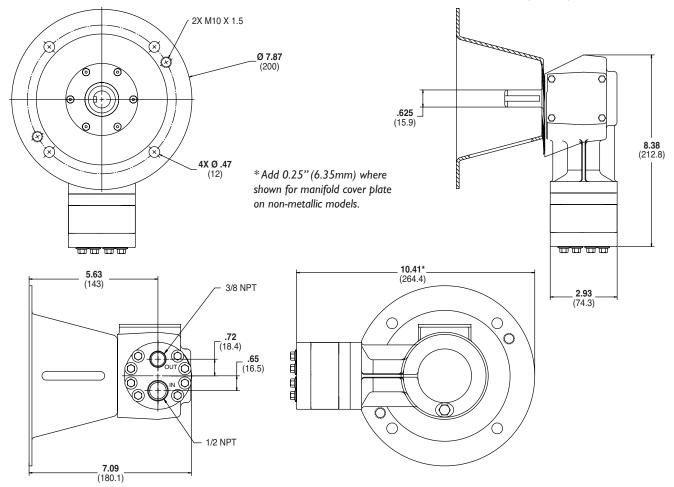

* Add 0.25" (6.35mm) where shown for manifold cover plate on non-metallic models.

Note: Contact factory for additional drawings of specific models and configurations.

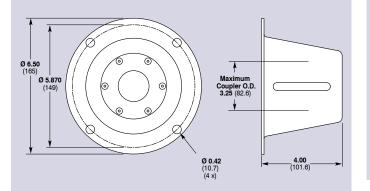

F20 Series Drawings/Adapters/Valves

F22 Models with Metallic Pump Head Inches (mm)

Note: Contact factory for additional drawings of specific models and configurations.

Pump/Motor Adapter Inches (mm)

Part Number: A04-005-1200

Must be ordered separately for F22 models for use with 56C, 143TC and 145TC frame motors.

Metric adapter available - consult factory.

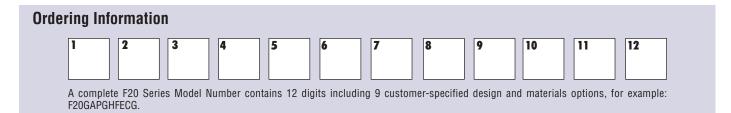

Valve Selection

A Hydra-Cell F20, F21 or F22 pumping system uses a C46 Pressure Regulating Valve.

For complete specifications and ordering information, consult the Hydra-Cell Master Catalog.

F20 Series How to Order
